The Making of the Industrial Landscape By Barrie Trinder ...

Artwork page for 'Industrial Landscape', L.S. Lowry, 1955 This picture is typical of the panoramic cityscapes that Lowry painted throughout his career. Although it is an imaginary composition, elements of the view are recognisable as real places. For example, the Stockport Viaduct, which constantly haunted the artist, can be seen in the top left of the picture.

Infrastructure: A Guide to the Industrial Landscape

Summary: The Black Country in the British Midlands was a distinct industrial district. It was incredibly rich in mineral resources, including coal, iron and limestone, which were extensively mined. It developed as a manufacturing area before 1700, producing glass and iron goods, but it was not until the 18th century, partly through the influence of John Wilkinson, that large concerns began to ...

The Making of the Industrial Landscape: Trinder, Barrie ...

In the 18th century, Britain became the first industrial nation and since then the landscapes of industry have come to form an essential part of the nation's scenery and lifestyle. This book describes the history of Britain's industries and shows how the industrial landscape has developed.

In this book, the author provides a detailed account of a major North American city's industrial landscape from the beginnings of industrialization to the Great Depression. He demonstrates that the process of industrial decentralization has been ongoing since the 1850s. His overall thesis is that the economic and social imperatives underlying industrial capitalism reshaped the manufacturing geography of Montreal ...

Pittsburgh's explosive industrial and population growth between the mid-nineteenth century and the Great Depression required constant attention to city-building. Private, profit-oriented firms, often with government involvement, provided necessary transportation, energy resources, and suitable industrial and residential sites. Meeting these requirements in the region's challenging hilly topographical and riverine environment resulted in the dramatic reshaping of the natural landscape. At the same time, the Pittsburgh region's free market, private enterprise emphasis created socio-economic imbalances and badly polluted the air, water, and land. Industrial stagnation, temporarily interrupted by wars, and then followed deindustrialization inspired the formation of powerful public-private partnerships to address the region's mounting infrastructural, economic, and social problems. The sixteen essays in *Making Industrial Pittsburgh Modern* examine important aspects of the modernizing efforts to make Pittsburgh and Southwestern Pennsylvania a successful metropolitan region. The city-building experiences continue to influence the region's economic transformation, spatial structure, and life experience.

Read Online Making Of The Industrial Landscape

This title was originally published in 2001. The version published in 2011 is a PB reprint of the original HB Manufactured Sites focuses on the legacy of industrial production and pollutants on the contemporary landscape and their influence on new scientific research, innovative site technologies and progressive site design. It presents innovative environmental, engineering and design approaches along with ongoing research and built projects of international significance. Contributions range from innovative scientific engineering research from industry and federal agencies to contemporary international and regional professional reclamation and redevelopment projects such as the 2000 Olympic Games in Sydney, Australia and the A.G. Thyssen steelworks and blast furnace planning in Germany's Ruhr region.

An illustrated history of the cradle of American industrialization

However, most of these spatial changes were contested. The chapters of this dissertation focus on the transformation of different spaces throughout the region and the struggles over the shape and meaning of the built environment as it modernized. In this way, I show how the process of reinvesting space with new meanings had social implications for a variety of groups residing in the area. Struggles sometimes stemmed from conflicts of identity, or social power, but even more often related to the sense that industrial developments usurped older, established ways of life.

"Original, highly readable. . . . An extraordinary book." —Anne Eisenberg, *Scientific American*
