The third edition of the Manual of Surgical Neonatal Intensive Care addresses the interdisciplinary area of the perioperative management of newborns with surgical conditions. The manual is a collaborative effort between the surgical staff at Children ' s Hospital and the medical staff at Boston Children ' s Hospital, Beth Israel Deaconess Medical Center, Brigham and Women ' s Hospital, and hospitals further afield. Its intended audience is surgeons, neonatologists, pediatricians, neonatal nurse practitioners, neonatal nurses, critical care transport clinicians, and all other healthcare providers trained to render pre- or postoperative services or counseling in the care of newborns. The authors intend for the manual to be useful to both medical and surgical clinicians. Where appropriate, chapters follow a standard order: embryology; prenatal diagnosis (treatment); postnatal presentation; postnatal diagnosis; differential diagnosis; preoperative management; implications for anesthesia; surgical management; postoperative management, complications and other outcomes. Illustrated in black and white with tables, drawings, and photographs, the text includes hands-on guidelines to the nonoperative management of newborns with surgical conditions.

This manual presents a spectrum of training scenarios for first responders in the neonatal unit setting. Mock codes provide a simulated experience of emergency situations with the intention of developing the technical skill, knowledge, critical thinking and teamwork of neonatal practitioners. The philosophy underlying a mock code program is to enhance the confidence of caregivers by practicing emergency techniques in a consequence-free environment. This volume is a landmark contribution to the neonatal literature in that it brings together, for the first time, a compendium of scenarios dealing exclusively with newborns in a variety of acute and critical care situations. A pocket-sized code card summarizes the most crucial points for each mock code providing a handy quick-reference review.

This comprehensive clinical practice manual emphasises evidence-based best practice, focusing on inter-disciplinary care of the child in hospital and community settings. The additional needs of neonates and adolescents are highlighted.
