innovative way of thinking about the project on financial literacy education. Using the concepts of ‘ edu-regulation ’ and ‘ financial knowledge democratisation ’ to analyse the financial education project in the UK, the book exposes serious, and often ignored, limitations to using information and education as tools for consumer protection. It challenges the mainstream representation of financial literacy education as a viable solution to consumer financial exclusion and poverty. Instead, it argues that the project on financial literacy education fails to acknowledge important dependences between consumer financial behaviour and the socio-economic, political, and cultural context within which consumers live. Finally, it reveals how these international and national calls for ever greater financial education oversimplify and underestimate the complexity of consumer financial decision-making in our modern times.

In Exam Literacy: A guide to doing what works (and not what doesn't) to better prepare students for exams, Jake Hunton focuses on the latest cognitive research into revision techniques and delivers proven strategies which actually work. Foreword by Professor John Dunlosky. 'Read, highlight, reread, repeat if such a revision cycle sounds all too wearily familiar, you and your students need a better route to exam success. And in light of the recent decision to make all subjects at GCSE linear, so that students will be tested in one-off sittings, it will be even more important that students are well equipped to acquire and recall key content ahead of their exams. In this wide-ranging guide to effective exam preparation, Jake Hunton casts a careful eye over a wide range of research into revision techniques and details the strategies which have been proven to deliver the best results. With plenty of

practical suggestions and subject-specific examples, Exam Literacy provides teachers with user-friendly advice on how they can make the content they cover stick, and shares up-to-date, evidence-based information on: The nature of learning and the various types of memory. How to improve students' retention of knowledge and recall of content. Why popular revision techniques, such as rereading, highlighting and summarising, may not be as effective as you think. How revision strategies that have been identified as being more effective such as interleaving, elaborative interrogation, self-explanation and retrieval practice can be embedded into day-to-day teaching. How students can be encouraged to make use of these winning strategies when revising independently.

Education Is Upside Down cuts through adjustments being made at technical levels of

educational practice and accountability, challenging ideals and philosophies that have powered American Education for most of the last century. This book explains how and why long-standing approaches generate flawed instructional practices, flawed systemic reform efforts, and a fundamental misalignment between the educational institution and the society it is missioned to serve. Education Is Upside Down urges readers wishing to improve American Education to more carefully consider the institution 's central mission, challenge long-accepted truths of practice, and question current reform efforts and actions. In full, Education Is Upside Down resists the practitioner-vs.-reformer blame game, seeking ultimately to carefully untangle—not tighten by yanking on any single strand—the long-complicated knot of American Education.

The Race To The Top (RTTP) federal education policy fostered a new generation of state tests. This policy advocated adopting common core standards which set a higher level of learning targets for students in the US K-12 education. These standards are intended to assess higher order thinking skills and prepare students ready for college and career. In the meantime, they are aligned with those for international assessments which keep US students abreast of their international peers. Furthermore, the new generation of state tests requires the use of technology enhanced items to align student assessments with student learning environment. Computer technology is indispensable to accomplish this goal. Computer based tests related to common core standards are different from previous state computer based tests in two important aspects, one is that the current version requires accurate assessment of students

along all ability levels and the other is that it promotes the use of an efficient test delivery system, essentially the use of computerized adaptive assessment in K-12 state testing programs. In addition to providing summative information about student learning, the new common core tests add formative assessment component in the whole assessment system to provide timely feedback to students and teachers during the process of student learning and teacher instruction. As with its predecessor, the new assessment policy also holds teachers and schools accountable for student learning. With the requirements by the new federal education policy, states formed two consortia: Partnership for Assessment of Readiness for College and Careers (PARCC) and Smarter Balanced Assessment Consortium (SBAC) to develop assessments in alignment with the new common core standards. This book is based

on the presentations made at the Thirteenth Annual Maryland Assessment Research Center ' s Conference on “ The Next Generation of Testing: Common Core Standards, Smarter?Balanced, PARCC, and the Nationwide Testing Movement ” . Experts from the consortia and nationwide overviewed the intention, history and the current status of this nationwide testing movement. Item development, test design, and transition from old state tests to the new consortia tests are discussed. Test scoring and reporting are specially highlighted in the book. The challenges related to standard setting for the new test, especially in the CAT environment and linking performance standards from state tests with consortium tests were explored. The issues of utilizing the consortium test results to evaluate students ' college and career readiness is another topic addressed in the book. The last chapters address the critical issue of

validity in the new generation of state testing programs. Overall, this book presents the latest status of the development of the two consortium assessment systems. It addresses the most challenging issues related to the next generation of state testing programs including development of innovative items assessing higher order thinking skills, scoring of such items, standard setting and linkage with the old state specific standards, and validity issues. This edited book provides a very good source of information related to the consortium tests based on the common core standards.

In most countries, only very limited time resources are available for statistics education within mathematics education. Thus, statistics education research needs to develop teaching-learning arrangements that are compact and applicable to classrooms. Christian B ü scher designs and investigates

a compact teaching-learning arrangement which aims at mathematical and reflective knowledge about statistics. Central results include the specification of the learning content of statistical measures, an empirical reconstruction of students' learning processes towards statistical measures, and the identification of students' situated reflections about mathematics within their learning processes.

Learning outside the classroom has been high on the political agenda for several years now, but recent Ofsted reports indicate that this can be confined to termly or yearly trips, as an 'extra'. This book provides a convincing and readable promotion of regular outdoor learning. It draws on relevant research to reinforce that working in 'real' environments benefits children's all-

round development — cognitively, emotionally, physically and spiritually. This is illustrated through a wide range of engaging activities, from how to make a scarecrow, to interpreting a painting in a gallery, from getting the best from a library visit, to how best to attack a medieval castle. This practical guide for busy teachers will help them to link what they do in and out of the class. It's a must for every staffroom bookshelf.

This volume promotes a thought-provoking discussion on contemporary issues surrounding the teaching of language and literacy based on first hand experiences and research. Drawing on the authors' experiences as teacher educators, language and literacy teachers, and researchers on literacy issues it brings together the multiple traditions. What makes the proposed volume unique is the common theme that

runs through all the chapters: the examination of the term literacy, the complexity of this term and the importance of having a wide understanding of what it is before tackling educational issues of pedagogy, assessment and student engagement. What is more, as the editors argue, it is necessary to join up the dots and explore the commonalities that form the core of the literacy spectrum.

This book is written primarily for pre-service and in-service teachers of Literacy/English Language Arts, school administrators, literacy graduate education students, and literacy education researchers, and addresses the myriad of questions regarding the implementation of the Common Core State Standards. Classroom teachers and pre-service teachers are currently confronting questions such as how they can teach the Common Core State

Standards to make sure they are fully addressing them; how they can have the time to teach students to have deeper understandings of the skills and concepts addressed in the Standards; what they can do to meet the learning needs of diverse students such as English language learners and students with learning disabilities; whether teachers of content areas are required to add reading instruction to their teaching responsibilities; whether the Standards tell teachers what to teach; and whether the document tells teachers how to implement the Standards in the classroom, among others. This book is designed to answer these questions and many others. Each chapter contains instructional practices, examples, vignettes, and illustrations that connect the Common Core State Standards to classroom practices, and thereby provide pre-service and in-service teachers with meaningful, relevant, and

practical teaching strategies to prepare culturally, academically, and linguistically diverse students in California and other states of the nation for both career and college. In this regard, readers of this book will find that the authors have provided a pathway to better understand the Common Core State Standards, and will be able to use what they learn in the pages of this book to provide more effective instruction for their students across the disciplines to read, analyse, and critique complex texts and apply knowledge to solve practical, real-life problems.

Literacy is a perennial ‘ hot topic ’ in Britain and other English-speaking countries. Concerns about falling standards and a ‘ literacy crisis ’ are frequently raised. In response, governments initiate new policies and teaching guidelines. This book addresses the current policies,

practices and media debates in England, the US, Scotland and Australia. Literacy and Education examines: How literacy is taught to children in primary schools; The place of phonics in current policies and the arguments made for and against it; How teachers deliver phonics lessons and how children engage with the method; The range of literacy practices children engage with throughout the school day and how they contribute to literacy learning; The contributions a social and critical perspective on literacy can make to current debates regarding teaching strategies; A wide range of research conducted in the UK, North America, Australia and other countries. Bringing together policy, practice and public debate and drawing on the author ' s extensive research in a primary school, this essential new textbook provides questions and tasks for readers to engage with. Literacy and Education is ideal for
