"A visionary investigation that will change the way we think about health care- how and why it is failing, why expanding coverage will actually make things worse, and how our health care can be transformed into a transparent, affordable, successful system. In 2007, David Goldhill's father died from infections acquired in a hospital, one of more than two hundred thousand avoidable deaths per year caused by medical error. The bill was enormous and Medicare paid it. These circumstances left Goldhill angry and determined to understand how world-class technology and personnel could coexist with such carelessness and how a business that failed so miserably could be paid in full. Catastrophic Care is the eye-opening result. Blending personal anecdotes and extensive research, Goldhill presents us with cogent, biting analysis that challenges the basic preconceptions that have shaped our thinking for decades. Contrasting the Island of health care with the Mainland of our economy, he demonstrates that high costs, excess medicine, terrible service, and medical error are the inevitable consequences of our insurance-based system. He explains why policy efforts to fix these problems have

Advancements in data science have created opportunities to sort, manage, and analyze large amounts of data more effectively and efficiently. Applying these new technologies to the healthcare industry, which has vast quantities of patient and medical data and is increasingly becoming more data-reliant, is crucial for refining medical practices and patient care. *Data Analytics in Medicine: Concepts, Methodologies, Tools, and Applications* is a vital reference source that examines practical applications of healthcare analytics for improved patient care, resource allocation, and medical performance, as well as for diagnosing, predicting, and identifying at-risk populations. Highlighting a range of topics such as data security and privacy, health informatics, and predictive analytics, this multi-volume book is ideally designed for doctors, hospital administrators, nurses, medical professionals, IT specialists, computer engineers, information technologists, biomedical engineers, data-processing specialists, healthcare practitioners, academicians, and researchers interested in current research on the connections between data analytics in the field of medicine.
