TODAY'S TECHNICIAN: AUTOMOTIVE ENGINE REPAIR & REBUILDING, CLASSROOM MANUAL AND SHOP MANUAL, Sixth Edition, delivers the theoretical and practical knowledge technicians need to repair and service modern automotive engines and prepare for the Automotive Service Excellence (ASE) Engine Repair certification exam. Designed to address all ASE Education Foundation standards for Engine Repair, this system-specific text addresses engine construction, engine operation, intake and exhaust systems, and engine repair, as well as the basics of engine rebuilding. Forward-looking discussions include advances in hybrid technology, factors affecting engine performance, and the design and function of modern engine components. Long known for its technical accuracy and concise writing style, the Sixth Edition of this reader-friendly text includes extensive updates to reflect the latest ASE Education Foundation standards, new information on current industry trends and developments, additional drawings and photos, and a variety of electronic tools for instructors. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The contributors provide a comparative analysis of the modern economic development of Japan and China that are often explained in frameworks of East Asian developmentalism, varies of capitalism or world economic system, and explore their broader significances for the rise and global expansion of modern economy.

Given the powerfully negative and ongoing impact of the Great Recession on western economies, the question of whether historically wealthy nations-the US, Western European countries, Japan-can stay wealthy has become an overriding concern for virtually every interested observer. Can their middle classes remain comfortable as more and more good and technically jobs disappear to other parts of the world? Can they support themselves as they devote more and more economic resources to an aging population base? In The Third Globalization, eminent political economists Dan Breznitz and John Zysman gather some of the discipline's leading scholars to assess the prospects for growth and prosperity among advanced industrial nations.

This book examines the national automotive policy in Malaysia to help readers gain an understanding of the country ' s industrial policy-making processes. Addressing a gap in analysis of the political economy of the national automotive policy, the research presented combines the new institutional theory and the developmental state approach to provide new insights into elite policymakers ' measures to shield domestic automotive enterprises from pro-market reforms. The formation of the national car project marks a turning point for Malaysia's industrial development as a country, which it envisions will lead to it becoming a major player in the global automotive market. However, the domestic institutional factors embedded in ethno-economic interests and patronage constrain national car-makers, limiting their potential to grow, and instead causing a slowdown in the industry. Allowing readers to understand the background to Malaysia ' s heavy industrialisation programme and the birth of its national car projects, this book critically discusses the significance of institutional context in policy outcomes, and highlights how institutions and policies have impact growth or decline. It is a valuable resource relevant to analysts, researchers and students who are interested in the political economy of the national industrial policy and automotive industry in Malaysia and beyond.

This book assesses the varying ways in which automobile assemblers in several countries of East and Southeast Asia, Europe and the Americas have sought to enhance their efficiency and flexibility in response to heightened global competition during the 1980s and early 1990s. It then explores the implications of such managerial strategies for workers and trade unions, and the responses of unions in seeking to preserve or enhance worker welfare and voice under industrial restructuring.

This book looks at the industrial policies of Southeast Asian economies in their motor vehicle industries from early import substitution to policy-making under the more liberalised WTO policy regime. The book examines how inward automotive investment, especially from Japan, has been affected by policies, and how such investment has promoted industrial development in the late-industrialising economies within ASEAN (Association of Southeast Asian Nations). It provides insights into the automotive industry of Southeast Asia in terms of production volumes, sales volumes, market structure, and trade. Through country case studies, the book is a useful reference and illustrates how industrial policies in Southeast Asia have affected the spread of automotive development in the region. It will appeal to policy-makers and researchers interested in the automobile industry, industrial policies in the industry and the spread of development from foreign investors to local firms.
