Governance is a word that is increasingly heard and read in modern times, be it corporate governance, global governance, or investment governance. Investment governance, the central concern of this modest volume, refers to the effective employment of resources—people, policies, processes, and systems—by an individual or governing body (the fiduciary or agent) seeking to fulfil their fiduciary duty to a principal (or beneficiary) in addressing an underlying investment challenge. Effective investment governance is an enabler of good stewardship, and for this reason it should, in our view, be of interest to all fiduciaries, no matter the size of the pool of assets or the nature of the beneficiaries. To emphasize the importance of effective investment governance and to demonstrate its flexibility across organization type, we consider our investment governance process within three contexts: defined contribution (DC) plans, defined benefit (DB) plans, and endowments and foundations (E&Fs). Since the financial crisis of 2007–2008, the financial sector ' s place in the economy and its methods and ethics have (rightly, in many cases) been under scrutiny. Coupled with this theme, the task of investment governance is of increasing importance due to the sheer weight of money, the retirement savings gap, demographic trends, regulation and activism, and rising standards of behavior based on higher expectations from those fiduciaries serve. These trends are at the same time related and self-reinforcing. Having explored the why of investment governance, we dedicate the remainder of the book to the question of how to bring it to bear as an essential component of good fiduciary practice. At this point, the reader might expect investment professionals to launch into a discussion about an investment process focused on the best way to capture returns. We resist this temptation. Instead, we contend that achieving outcomes on behalf of beneficiaries is as much about managing risks as it is about capturing returns—and we mean " risks " broadly construed, not just fluctuations in asset values.

Alternative Investments: A Primer for Investment Professionals provides an overview of alternative investments for institutional asset allocators and other overseers of portfolios containing both traditional and alternative assets. It is designed for those with substantial experience regarding traditional investments in stocks and bonds but limited familiarity regarding alternative assets, alternative strategies, and alternative portfolio management. The primer categorizes alternative assets into four groups: hedge funds, real assets, private equity, and structured products/derivatives. Real assets include vacant land, farmland, timber, infrastructure, intellectual property, commodities, and private real estate. For each group, the primer provides essential information about the characteristics, challenges, and purposes of these institutional-quality alternative assets in the context of a well-diversified institutional portfolio. Other topics addressed by this primer include tail risk, due diligence of the investment process and operations, measurement and management of risks and returns, setting return expectations, and portfolio construction. The primer concludes with a chapter on the case for investing in alternatives.

An Investment Framework for Nutrition: Reaching the Global Targets for Stunting, Anemia, Breastfeeding, and Wasting estimates the costs, impacts, and financing scenarios to achieve the World Health Assembly global nutrition targets for stunting, anemia in women, exclusive breastfeeding and the scaling up of the treatment of severe wasting among young children. To reach these four targets, the world needs US\$70 billion over 10 years to invest in high-impact nutrition-specific interventions. This investment would have enormous benefits: 65 million cases of stunting and 265 million cases of anemia in women would be prevented in 2025 as compared with the 2015 baseline. In addition, at least 91 million more children would be treated for severe wasting and 105 million additional babies would be exclusively breastfed during the first six months of life over 10 years. Altogether, achieving these targets would avert at least 3.7 million child deaths. Every dollar invested in this package of interventions would yield between US\$4 and US\$35 in economic returns, making investing in early nutrition one of the best value-for-money development actions. Although some of the targets—especially those for reducing stunting in children and anemia in women—are ambitious and will require concerted efforts in financing, scale-up, and sustained commitment, recent experience from several countries suggests that meeting these targets is feasible. These investments in the critical 1000-day window of early childhood are inalienable and portable and will pay lifelong dividends—not only for children directly affected but also for us all in the form of more robust societies—that will drive future economies.

Financial science, both quantitative and behavioral, can be used to improve the retirement planning effort. Despite a vast amount of literature on the topic, Secure Retirement recognizes the need to validate this knowledge and develop a comprehensive framework for investors.

"The authors have provided an interesting and helpful resource to understand and manage the nonprofit organization's investments. I believe that this book should be in the library of all nonprofit practitioners that are concerned about prudent stewardship." —Jim Croft, PhD, Vice President, Finance and Administration The Field Museum (Chicago, Illinois) "This book is a straightforward, well-written guide to the strategies and administration of investment assets of nonprofit institutions. It relies on the principles of modern portfolio theory in emphasizing asset diversification, performance measurement, and careful manager selection. It debunks much of what passes for 'investment advice' in the popular media. To their credit, the authors describe the challenges, factors, and actors in the investment industry, from the perspective of the individuals and committees charged by nonprofit institutions with investment oversight responsibility." —John E. Allerson, Senior Vice President, Finance and Operations and Chief Financial Officer, Roosevelt University (Chicago, Illinois) "I would consider this book 'Investments 101' for anyone who deals with overseeing investments of a company, whether it is a profit or nonprofit. Yet, at the same time, it would help all investors, small or large, in dealing with their own individual portfolios. DiMeo, Schneider, Benoit, et al. have organized the book in such a way that each chapter deals with the very essence of how to structure an investment portfolio and how to look at the complex environment in an easy way." —Kevin Higdon, Vice President of Finance Elkhart General Hospital (Elkhart, Indiana) "From modern portfolio theory to the role of the fiduciary, The Practical Guide to Managing Nonprofit Assets provides trustees of nonprofit funds with a chapter-by-chapter explanation of what they should know to carry out their responsibilities. For the uninitiated, it creates a foundation for understanding investing in a difficult environment. For the experienced, it serves as a checklist of issues to be considered in exercising appropriate investment oversight." —Thomas H. Hodges, Executive Vice President, Finance, and Treasurer Evanston Northwestern Healthcare (Evanston, Illinois)

The dynamic environment of investment banks, hedge funds, and private equity firms comes to life in David Stowell ' s introduction to the ways they challenge and sustain each other. Capturing their reshaped business plans in the wake of the 2007-2009 global meltdown, his book reveals their key functions, compensation systems, unique roles in wealth creation and risk management, and epic battles for investor funds and corporate influence. Its combination of perspectives—drawn from his industry and academic backgrounds—delivers insights that illuminate the post-2009 reinvention and acclimation processes. Through a broad view of the ways these financial institutions affect corporations, governments, and individuals, Professor Stowell shows us how and why they will continue to project their power and influence. Emphasizes the needs for capital, sources of capital, and the process of getting capital to those who need it. Integrates into the chapters ten cases about recent transactions, along with case notes and questions Accompanies cases with spreadsheets for readers to create their own analytical frameworks and consider choices and opportunities.

Analyzes the principles of stock selection and various approaches to investing, and compares the patterns and behavior of specific securities under diverse economic conditions
