Multi-Threaded Object-Oriented MPI-Based Message Passing Interface: The ARCH Library presents ARCH, a library built as an extension to MPI. ARCH relies

on a small set of programming abstractions that allow the writing of well-structured multi-threaded parallel codes according to the object-oriented programming style. ARCH has been written with C++. The book describes the built-in classes, and illustrates their use through several template application cases in several fields of interest: Distributed Algorithms (global completion detection, distributed process serialization), Parallel Combinatorial Optimization (A\* procedure), Parallel Image-Processing (segmentation by region growing). It shows how new application-level distributed data types - such as a distributed tree and a distributed graph - can be derived from the built-in classes. A feature of interest to readers is that both the library and the application codes used for illustration purposes are available via the Internet. The material can be downloaded for installation and personal parallel code development on the reader's computer system. ARCH can be run on Unix/Linux as well as Windows NT-based platforms. Current installations include the IBM-SP2, the CRAY-T3E, the Intel Paragon, PC-networks under Linux or Windows NT. Multi-Threaded Object-Oriented MPI-Based Message Passing Interface: The ARCH Library is aimed at scientists who need to implement parallel/distributed algorithms requiring complicated local and/or distributed control structures. It can also benefit parallel/distributed program developers who wish to write codes in the object-oriented style. The author has been using ARCH for several years as a medium to teach parallel and network programming. Teachers can employ the library for the same purpose while students can use it for training. Although ARCH has been used so far in an academic environment, it will be an effective tool for professionals as well. Multi-Threaded Object-Oriented MPI-Based Message Passing Interface: The ARCH Library is suitable as a secondary text for a graduate level course on Data Communications and Networks, Programming Languages, Algorithms and Computational Theory and Distributed Computing and as a reference for researchers and practitioners in industry.

The go-to legal resource for today's principals! New technology and world events have upended everything we once took for granted about schools, including the laws and policies that govern them. School safety concerns, curriculum challenges, the ever-changing landscape of social media, and the 2020/2021 COVID-19 crisis have made school leadership an infinitely more complex arena. Familiarity with the law is essential to help principals maintain safe and equitable communities and minimize legal risk. The 4th edition of *The Principal's Quick-Reference Guide to School Law* provides the go-to help principals need to increase their knowledge of education law in this time of change. Within its pages, leaders can access tools to help them make better decisions when educational law related issues impact their schools. Readers will find A completely revamped design for easier reference Practical examples to help demystify complex cases Updated cases studies from 2014 to today Guidance on new topics, such as vaping, sexting, student protests and walkouts An "Education Law 101 for Teachers" section to help leaders provide basic legal training for staff and teachers. Written for aspiring and current school principals, this book will answer all the "what if" questions that inevitably arise at least once in every leader's tenure.
