Core concepts. Contemporary ideas. Outstanding, innovative resources. To succeed in your business studies, you will need to master core finance concepts and learn to identify and solve many business problems. Learning to apply financial metrics and value creation as inputs to decision making is a critical skill in any kind of organisation. Fundamentals of Corporate Finance shows you how to do just that. Berk presents the fundamentals of business finance using the Valuation Principle as a clear, unifying framework. Throughout the text, its many applications use familiar Australian examples and makes consistent use of real-world data. This Australian adaptation of the highly successful US text Fundamentals of Corporate Finance features a high-calibre author team of respected academics. The second edition builds on the strengths of the first edition, and incorporates updated figures, tables and facts to reflect key developments in the field of

finance. For corporate finance or financial management students, at undergraduate or post-graduate level.

This textbook presents a comprehensive treatment of the legal arrangement of the corporation, the instruments and institutions through which capital can be raised, the management of the flow of funds through the individual firm, and the methods of dividing the risks and returns among the various contributors of funds. Now in its second edition, the book covers a wide range of topics in corporate finance, from time series modeling and regression analysis to multi-factor risk models and the Capital Asset Pricing Model. Guerard, Gultekin and Saxena build significantly on the first edition of the text, but retain the core chapters on cornerstone topics such as mergers and acquisitions, regulatory environments, bankruptcy and various other foundational concepts of corporate finance. New to the second edition are examinations of APT portfolio selection and time series modeling and forecasting through SAS, SCA and OxMetrics programming, FactSet fundamental data templates. This is intended to be a graduate-level textbook, and could be used as a primary text in upper level MBA and Financial Engineering courses, as well as a supplementary text for graduate courses in financial data analysis and financial investments.

Corporate finance is a complex field composed of a broad variety of sub-disciplines, each involving a specific skill set and nuanced body of knowledge. This text is designed to give you an intuitive understanding of the fundamentals to provide a solid foundation for more advanced study.

Macroeconomics and Financial Markets develops a macroeconomic view of asset price determination and volatility within and between business cycles. It seeks to explain money market interest rates, bond yields, share prices, and exchange rates, and develops a financial markets model to derive optimal investment strategies for an internationally-diversified portfolio.

Capital structure choice is essential for an institution to maximize its value. Because the institution's decision maker decides how to finance projects before making investment decisions, its financial decisions ultimately affect every aspect of operations thereafter. This book discusses several key theories of corporate capital structure to answer how funding structure shapes an institution's value. In this book, the author emphasizes the microeconomic foundations of capital structure theory. He shows how various

microeconomic frameworks, such as price and game theories, principal-agent model, and mechanism design, can be applied to solve the optimal capital structure of a firm. By getting used to optimizing corporate capital structures subject to various constraints via microeconomic frameworks, readers will become capable of investigating how to finance projects in their own setups. Thus, this book not only informs readers of specific knowledge but also provides them with tools to solve new problems that they will face in their future. This book will be a valuable resource for students of corporate finance at the postgraduate or doctoral level and will serve as the material for professional training aimed at practitioners and regulators with technical expertise.

Corporate finance is the area of finance that studies the determinants of firms' values, including capital structure, financing, and investment decisions. Although there are several excellent texts in corporate finance, this is the first to focus on the theoretical foundations of the subject in a consistent and integrated way at the Ph.D. level. In addition to a textbook for advanced graduate students, it can also serve as a general reference to researchers and sophisticated practitioners. The material presented is carefully selected with an eye to what is essential to understanding the

underlying theory, ensuring that this text will remain useful for years to come. The book is divided into three parts. The first section presents the basic principles of valuation based on the absence of arbitrage, including a discussion of the determinants of the optimal capital structure based on the seminal results of Modigliani and Miller. The second section discusses the implications of agency problems and information asymmetries to capital structure, giving particular attention to payout policy and to debt contract design. The concluding portion presents different ways of restructuring capital, including going public, going private using stock repurchases or leveraged buyouts, and mergers and acquisitions. Each chapter includes exercises that vary in difficulty, with suggested solutions provided in an appendix. This book will assuredly be the standard doctoral- and professional-level explication of corporate finance theory and its appropriate applications.

Tertiary economics and business education started early in Australia but was not organised on a faculty basis until the 20th century. Commerce and business teaching at Sydney University began in 1906, and from 1920 was taught in the Faculty of Economics, together with public administration and accounting. Its progress for the next 80 years is chronicled in this comprehensive history of the Faculty of Economics. The book presents a broad overview of staff, students and courses of study during Depression, war, postwar reconstruction, student unrest and successful moves to add further Business studies. A prelude surveys the 19th-century beginnings and the epilogue presents the varied education opportunities offered for the 21st century by the Faculty of Economics and Business.
