HDX 7000. A critical vulnerability has been discovered in the Polycom shell (psh) functionality on the HDX's diagnostics port (port tcp/23). This vulnerability could allow a remote attacker to execute arbitrary code on the HDX, which could lead to complete compromise of the system. HDX version 3.1.13 addresses this vulnerability.

I am a new HDX 7000 owner and need to find out if it contains a hard disk because it rides in a cart over some really bumpy concrete floors with gratings. I need to know if I should take additional precautions or just tell the users to let 'er rip. Thanks in advance.

This book examines the relationships between online visual interfaces and language use in educational contexts and the features that underpin them to explore the complex nature of online communication and its implications for educational practice. Adopting a case study approach featuring a global range of examples, the volume uniquely focuses on multimodal intercultural interactions, with a particular interest in videoconferencing, to look at how they project and reflect particular cultural values and tendencies concerning language use and how they elucidate the complex cultural identifications and affiliations inherent in intercultural encounters. The book employs a diverse range of theoretical and research frameworks to highlight the dynamic connections between digital technology, social life, and language use, and the ways in which they can inform language education, making this an ideal resource for students and scholars in applied linguistics, communication studies, media studies, information studies, and education.

Health security is dependent on many factors such as: individual government policies and regulations; budgets; management systems; and the collection, analysis, use, and protection of data. Telemedicine has the potential to change how healthcare is delivered around the world, and has developed to the point where it is possible for its use to become commonplace. The questions are, however, whether and how the use of telemedicine will improve health security in Southeast Europe. This book presents papers from the NATO Advanced Research Workshop (ARW) on Benchmarking Telemedicine: Improving Health Security in the Balkans, held in Skopje, Macedonia, in November 2016. The aim of the workshop was to bring together people from a wide range of sectors within the telemedicine community with representatives of NATO Member and Partner countries to share information and develop solutions to health security issues. Participants addressed issues such as cyber security for the implementation of telemedicine; healthcare capabilities of deployed and local medical equipment; learning methods; information sharing among local professionals; prevention and control of infectious diseases; best practices of telemedicine among NATO Member and Partner countries; integration of telemedicine across regions and borders; and telemedicine implementation. The book will be of interest to all those wishing to gain a better insight into the implications of telemedicine for health security.

The volume constitutes a state-of-the-art account of issues related to teaching, learning and testing speaking in a second language. It brings together contributions by Polish and international scholars which seek to create links between theory, research and classroom practice, report the findings of studies investigating the impact of linguistic, cognitive and affective factors on the development and use of speaking skills, and provide concrete pedagogic proposals for instruction and assessment in this area. As such, the book will be of interest not only to second language acquisition theorists and researchers, but also to foreign language teachers willing to enhance the quality of speaking instruction in their classrooms.

Health care is primarily about people-to-people interactions. It is about understanding, diagnosis, physical contact, communication, and, ultimately, providing care. By bringing people together, telecommunication technologies have the potential to improve both the quality of and access to health care in the remotest areas of the developing world. Telemedicine offers solutions for emergency medical assistance, long-distance consultation, administration and logistics, supervision and quality assurance, and education and training for healthcare professionals and providers. This book aims to redress the relative lack of published information on successful telehealth solutions in the developing world. It presents real-life stories from Asia, Africa, and Latin America. It is rich in practical experience and will be of interest to health professionals, development workers, and e-health and telehealth proponents interested in learning about, or contributing to the implementation of, appropriate solutions for 80% of the world's population.
