In Indian Communities in Southeast Asia thirty-one scholars provide an analytical commentary on the contemporary position of ethnic Indians in Southeast Asia. The book is the outcome of a ten-year project undertaken by the editors at the Institute of Southeast Asian Studies, Singapore. It is multi-disciplinary in focus and multi-faceted in approach, providing a comprehensive account of the way people originating from the Indian subcontinent have integrated themselves in the various Southeast Asian countries. The study provides insights into understanding how Indians, an intra-ethnically diverse immigrant group, have intermingled in Southeast Asia, a region that itself is ethnically diverse.

This is the first volume of its kind on prehistoric cultures of South Asia. The book brings together archaeologists, biological anthropologists, geneticists and linguists in order to provide a comprehensive account of the history and evolution of human populations residing in the subcontinent. New theories and methodologies presented provide new interpretations about the cultural history and evolution of populations in South Asia.

Nutritional and Health Aspects of Food in South Asian Countries provides an analysis of traditional and ethnic foods from the South Asia Region, including India, Sri Lanka, Pakistan, Nepal, Bangladesh and Iran. The book addresses the history of use, origin, composition, preparation, ingredient composition, nutritional aspects, and the effects on the health of various foods and food products in each of these countries from the perspective of their Traditional and Ethnic Foods. In addition, the book presents local and international regulations and provides suggestions on how to harmonize regulations and traditional practices to promote safety and global availability of these foods.

Issued three times a year, the Asia-Pacific Population Journal is an invaluable resource containing opinions and analysis by experts on important issues related to population. It provides a medium for the international exchange of knowledge, experience, ideas, technical information and data on all aspects of population.

Contains over eight hundred alphabetically arranged entries that provide information about topics related to the historical development and global influence of Southeast Asia, covering politics, war, religion, socioeconomics, ethnohistory, geography, and folklore.

Chronic Kidney Disease in Disadvantaged Populations investigates the increased incidence and prevalence of kidney disease in vulnerable populations world-wide. The volume explores the complex interactions of genetic, biologic, cultural and socioeconomic factors such as the environment, and specific health behaviors that seem to be responsible for a significant proportion of the health disparities in these communities. Each chapter is written by leading experts in the field and analyzes the prevalence and incidence of pre-dialysis kidney disease in disadvantaged populations across both developed and developing countries. In addition, each contribution analyzes differentiated risk factors and compares the disparities in access to screening, prevention strategies, treatment protocols and renal replacement therapies. Chronic Kidney Disease in Disadvantaged Populations is essential reading for residents, fellows, clinicians and biomedical researchers working in nephrology, internal medicine, and epidemiology, especially those working in areas with high concentrations of disadvantaged populations. Presents a comprehensive account of both traditional and non-traditional risk factors for kidney disease Explores the mechanisms by which poverty increases the burden of kidney disease in these populations, barriers to access to renal health care, including renal replacement therapies, organ donation, and organ commercialization Offers the latest perspectives on outcomes in renal replacement therapies as well as prevention strategies

First published in 1964, The Economic Development of South-East Asia: Studies in economic history and political economy contains eight papers originally written for a study group at the School of Oriental and African Studies in London. The papers, edited by Professor C. D. Cowan, are written against a background of economic underdevelopment in large parts of Asia. Economic problems increasingly plagued the governments of Asia after the Second World War, and while Western governments were willing to help foster economic development, relations with Asian governments were somewhat hindered by the heritage of their colonial past. Problems also related to the growth of traditional trading ports and export crops, and to the importation of colonial regimes, western funds and skills in the nineteenth century. Such developments come under the loosely generalised concept of imperialism, with its strongly emotional overtones, whose use impedes the objective assessment and analysis of facts. While we understand a good deal about conditions of economic growth in the West, much of what has fostered or retarded growth in other parts of the world remains less clear.

New perspectives on the past and present contributions of the 25 million strong Chinese diaspora in Southeast Asia to the development of contemporary society. Case studies feature organisational, community, religious, and other arenas of Chinese activity and identity definition, and the book analyses the interplay of local, regional, global and transnational networks and identities.
