That The Present Book Will Prove Immensely Useful For The Students And Teachers Of Both Education And Psychology. Even The General Readers Will Find It Highly Informative.

Originally published in 1979, this title is based upon Professor Stones' extensive work with practising and student teachers. His overriding concern is with the contribution of psychology to pedagogy to help practitioners improve their practice and theorists test their theories. He develops the thesis that teaching involves the teacher in psychological experimentation. Thus one of the most important laboratories for testing the application of learning theories is the classroom. The adoption of this view offers the potential for transforming teaching and our understanding of human learning. Unlike the majority of books in the field of educational psychology at the time it is not a synoptic anthology of the writings of the current gurus in the field or its close neighbours. Instead, guides are given to teachers/experimenters to plan, try out and evaluate their teaching/experimenting. The central theme adopted at the outset and held throughout the book is the improvement of teaching through the explicit, informed use of psychopedagogical principles.

This volume represents a beginning effort to compile a history of educational psychology. The project began, innocuously enough, several years ago when we decided to add mon material about the history of educational psychology to the undergraduate course we were teaching. What seemed like a simple task became very complex as we searched in vain for a volume dealing with the topic. We ended up drawing on various histories of psychology that devoted anywhere from a few paragraphs to several pages to the topic and on a very few articles addressing the issue. We were startled, frankly, by the apparent lack of interest in the history of our field and decided to attempt to compile a history ourselves. As is the case with any edited volume,

the contributing authors deserve credit for its positive features. They uniformly made every effort asked of them and taught us much about educational psychology. Any errors or omissions are our responsibility alone.
