critical thinking and active engagement with the reading. Laura King's contemporary, engaging, and personal writing style draws students into the text and encourages them to read more actively and critically. The Science of Psychology adapts to students individually and provides a roadmap for success that gets students reading and studying more frequently, effectively, and efficiently. The adaptive questioning diagnostic in the Connect Psychology web-based assignment and assessment platforms ensures students understand key chapter concepts. Connect Psychology - turnkey course setups are available almost immediately, or the course can be customized at virtually any level. This makes The Science of Psychology perfect for face-to-face, online, or hybrid course delivery.

"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

Educational Psychology helps students think critically about the research basis for best practices. Additionally, Santrock's hallmark Learning System organizes the content into manageable chunks to support retention and mastery, and make it much more likely that students will have an engaging and successful course experience.

Research Methods for Forensic Psychologists is an accessible and comprehensive textbook that introduces students to the research process in forensic psychology. Adopting a problem-based learning approach, this book offers a 'how-to' guide to the whole research process and empowers readers to develop their own programme of research, from initial vague ideas, to developing a research question, to carrying out a methodologically rigorous research project, to disseminating the findings. The text is centred on five case studies, sufficiently different in nature to address the most common research methodologies. Each case study is linked with a specific research question that will be used to illustrate the research process throughout the rest of the book. Topics covered in the book include: Design and Planning, including a literature search, a discussion of different sorts of data,

practical and feasibility issues, research ethics and developing a research proposal. Conducting research, including the submission of ethics proposals and responding to feedback, collecting data and dealing with the problems and challenges of analysing data. Dissemination of findings, an overview of the different types of papers, with examples listed and other methods of disseminating findings discussed, such as conference presentations and the use of social media. Throughout, issues of common difficulty or confusion are highlighted and activities are provided for readers to consider and apply the information discussed further. Additional reading sections and summaries are also provided at the end of each chapter. This book is essential reading for advanced students in Forensic Psychology, as well as trainees and practitioners within relevant forensic psychology organisations.
