If you're feeling the need to de-stress, be happier, and improve your health, then head to Lake County for some time-honored Japanese traditions. Good Day Orlando's David Martin found Kashimon Dojo, ...

This book disrupts disciplinary boundaries to make a case for the future direction and growth of martial arts studies as a unique field

The book presents three Japanese psychotherapeutic approaches, Morita, Naikan, and Dohsa-hou, in the chronological order of their development, giving a thorough account of both their underlying concepts and practical applications. In addition to describing their idiosyncrasies, a major focus of the book is also to elucidate as to how the deeply imprinted cultural specificities of these approaches, emanating from their common cultural ground, converge to two focal points—silence and body-mind interconnectedness—that vest the approaches with their therapeutic power. In so doing, the book gives an insight into the intrinsic dynamics of the methods and emphasizes on their potential for universal applicability notwithstanding their indisputable cultural peculiarities. This self-contained and well-structured book fills the gap in the yet scarce English-language literature on Japanese psychotherapies.

You probably know that food, water, sunlight, and oxygen are required for life, but there is a fifth element of health that is equally vital and often overlooked: The Earth's magnetic field and its corresponding PEMFs (pulsed electromagnetic fields). The two main components of Earth's PEMFs, the Schumann and Geomagnetic frequencies, are so essential that NASA and the Russian space program equip their spacecrafts with devices that replicate these frequencies. These frequencies are absolutely necessary for the human body's circadian rhythms, energy production, and even keeping the body free from pain. But there is a big problem on planet earth right now, rather, a twofold problem, as to why we are no longer getting these life-nurturing energies of the earth. In this book we'll explore the current problem and how the new science of PEMF therapy (a branch of energy medicine), based on modern quantum field theory, is the solution to this problem, with the many benefits listed below: • eliminate pain and inflammation naturally • get deep, rejuvenating sleep • increase your energy and vitality • feel younger, stronger, and more flexible • keep your bones strong and healthy • help your body with healing and regeneration • improve circulation and heart health • plus many more benefits

Less than a century ago, physicians, scientists, and cultural commentators became fascinated by the endocrine glands and the effects of their secretions on our bodies and minds. Of all the characteristics supposed to be governed by them, the attributes of sex evoked the wildest interest. The gonads, it was revealed, secreted chemicals that not only influenced the biological expressions of sex, but seemed to generate the vitality and energy that made life worth living. Through a series of case studies drawn from Central Europe, the United States, and Britain, The Most Secret Quintessence of Life explores how the notion of sex hormones enabled scientists to remap the human body, encouraging hopes that glandular interventions could cure ills, malfunctions, and even social deviance in ways inconceivable to previous generations. Many of these dreams failed, but their history, Chandak Sengoopta shows, takes us into the very heart of scientific medicine, revealing how even its most arcane concerns are shaped by cultural preoccupations and anxieties. Offering a painstakingly researched and absorbing account of a century of glandular and hormone research, The Most Secret Quintessence of Life will be heralded as a major achievement by scholars working on the history of medicine and its influence on modern ideas of the body, sexuality, and gender.

A History of Chinese Science and Technology (Volumes 1, 2 & 3) presents 44 individual lectures, beginning with Ancient Chinese Science and Technology in the Process of Human Civilizations and an Overview of Chinese Science and Technology, and continuing with in-depth discussions of several issues in the History of Science and the Needham Puzzle, interspersed with topics on Astronomy, Arithmetic, Agriculture and Medicine, The Four Great Inventions, and various technological areas closely related to clothing, food, shelter and transportation. This book is the most authoritative work on the history of Chinese Science and Technology. It is the Winner of the China Book Award, the Shanghai Book Award (1st prize), and the Classical China International Publishing Project (GAPP, General Administration of Press and Publication of China) and offers an essential resource for academic researchers and non-experts alike. It originated with a series of 44 lectures presented to top Chinese leaders, which received very positive feedback. Written by top Chinese scholars in their respective fields from the Institute for the History of Natural Sciences, Chinese Academy of Sciences and many other respected Chinese organizations, the book is intended for scientists, researchers and postgraduate students working in the history of science, philosophy of science and technology, and related disciplines. Yongxiang Lu is a professor, former president and member of the Chinese Academy of Sciences (CAS) and Chinese Academy of Engineering (CAE), and Vice Chairman of the National Congress of China.

Text in English and French with added t.p. in French: La quintessence de Sartre. "The essays published in this volume were originally delivered as lectures ... in 1968 on the C.B.C. public affairs program "Ideas," under the title Marxism and Existentialism." (p. [9]).

This edited collection explores the historical dimensions, cultural practices, socio-economic mechanisms and political agendas that shape the notion of a national cuisine inside and outside of Japan. Japanese food is often perceived as pure, natural, healthy and timeless, and these words not only fuel a hype surrounding Japanese food and lifestyle worldwide, but also a domestic retro-movement that finds health and authenticity in 'traditional' ingredients, dishes and foodways. The authors in this volume bring together research from the fields of history, cultural and religious studies, food studies as well as political science and international relations, and aim to shed light on relevant aspects of culinary nationalism in Japan while unearthing the underlying patterns and processes in the construction of food identities.

"What does it mean to be lonely?" Dumm asks. His inquiry, documented in this book, takes us beyond social circumstances and into the deeper forces that shape our very existence as modern individuals. The modern individual, Dumm suggests, is fundamentally a lonely self. This book challenges us, not to overcome our loneliness, but to learn how to re-inhabit it in a better way.
