The Full Transcript of the Most Shocking Testimony of the Trump Era “ I am ashamed that I chose to take part in concealing Mr. Trump ' s illicit acts. . . . I am ashamed because I know what Mr. Trump is. He is a racist. He is a conman. He is a cheat. ” —from Michael Cohen ' s Opening Statement to the House Oversight Committee “ Michael Cohen . . .was just disbarred by the State Supreme Court for lying & fraud. He did bad things unrelated to Trump. He is lying in order to reduce his prison time. ” —President Donald J. Trump On February 27, 2019, with the world watching, Michael Cohen—former lawyer and fixer for President Donald J. Trump—took the stand in front of the House Oversight Committee and delivered one of the most sensational days of Congressional testimony in history. Not since President Richard Nixon ' s White House counsel John Dean turned on him during the Watergate scandal has a close Presidential associate attacked the character of the Chief of State and charged him with criminal acts. Here in one volume is living history—the hard-hitting prepared statements, the damning evidence, the salacious charges, the belligerent questioning, and the stunning revelations.

This comprehensive resource provides readers with the tools necessary to perform analysis of various waveforms for use in radar systems. It provides information about how to produce synthetic aperture (SAR) images by giving a tomographic formulation and implementation for SAR imaging. Tracking filter fundamentals, and each parameter associated with the filter and how each affects tracking performance are also presented. Various radar cross section measurement techniques are covered, along with waveform selection analysis through the study of the ambiguity function for each particular waveform from simple linear frequency modulation (LFM) waveforms to more complicated coded waveforms. The text includes the Python tool suite, which allows the reader to analyze and predict radar performance for various scenarios and applications. Also provided are MATLAB® scripts corresponding to the Python tools. The software includes a user-friendly graphical user interface (GUI) that provides visualizations of the concepts being covered. Users have full access to both the Python and MATLAB source code to modify for their application. With examples using the tool suite are given at the end of each chapter, this text gives readers a clear understanding of how important target scattering is in areas of target detection, target tracking, pulse integration, and target discrimination.

A history of the Korean War with soldier ' s-eye views from both sides, by the Pulitzer Prize–winning author of The Rising Sun and Infamy. Pulitzer Prize–winning author John Toland reports on the Korean War in a revolutionary way in this thoroughly researched and riveting book. Toland pored over military archives and was the first person to gain access to previously undisclosed Chinese records, which allowed him to investigate Chairman Mao ' s direct involvement in the conflict. Toland supplements his captivating history with in-depth interviews with more than two hundred American soldiers, as well as North Korean, South Korean, and Chinese combatants, plus dozens of poignant photographs, bringing those who fought to vivid life and honoring the memory of those lost. In Mortal Combat is comprehensive in its discussion of events deemed controversial, such as American brutality against Korean civilians and allegations of American use of biological warfare. Toland tells the dramatic account of the Korean War from start to finish, from the appalling experience of its POWs to Mao ' s prediction of MacArthur ' s Inchon invasion. Toland ' s account of the “ forgotten war ” is a must-read for any history aficionado.
