the jungles of South America to the streets of Paris. As an undercover DEA agent, Marshall penetrated a powerful cartel and became the trusted right-hand man of a ruthless drug lord. The price he paid was devastating, costing him everything--and everyone--he loved. Back in the U.S., on temporary assignment to the Secret Service, on the presidential detail, Marshall performs an act of heroism that changes his course forever. Ariana Gregory has her whole future ahead of her, with an exciting life in Manhattan and a coveted job at an online fashion magazine. But when her father, recently widowed, is appointed U.S. ambassador to Argentina, she reluctantly agrees to accompany him to Buenos Aires. Then an unthinkable act of violence shatters her world. Nearly a year later, Ariana arrives in Paris, on a fragile road to recovery. There, as she strives to bury painful memories forever, she crosses paths with Marshall Everett. But dangerous forces watch her every move, and Ariana and Marshall will once more have to fight for their survival. In this breathtaking and psychologically penetrating novel, #1 New York Times bestselling author Danielle Steel explores the consequences of trauma and the perseverance of the human spirit. In Marshall and Ariana she has created two unforgettable characters confronting extraordinary challenges--who no longer need to face them alone.

This book traces the ways Berlin has been narrated across three centuries by some 100 authors. It presents a composite landscape not only of the German capital, but of shifting subtexts in American society.

Discusses using King's works in the classroom

Racism in America has been the subject of serious scholarship for decades. At Harvard University Press, we've had the honor of publishing some of the most influential books on the subject. The excerpts in this volume—culled from works of history, law, sociology, medicine, economics, critical theory, philosophy, art, and literature—are an invitation to understand anti-Black racism through the eyes of our most incisive commentators. Readers will find such classic selections as Toni Morrison's description of the Africanist presence in the White American literary imagination, Walter Johnson's depiction of the nation's largest slave market, and Stuart Hall's theorization of the relationship between race and nationhood. More recent voices include Khalil Gibran Muhammad on the pernicious myth of Black criminality, Elizabeth Hinton on the link between mass incarceration and 1960s social welfare programs, Anthony Abraham Jack on how elite institutions continue to fail first-generation college students, Mehrsa Baradaran on the racial wealth gap, Nicole Fleetwood on carceral art, and Joshua Bennett on the anti-Black bias implicit in how we talk about animals and the environment. Because the experiences of non-White people are integral to the history of racism and often bound up in the story of Black Americans, we have included writers who focus on the struggles of Native Americans, Latinos, and Asians as well. Racism in America is for all curious readers, teachers, and students who wish to discover for themselves the complex and rewarding intellectual work that has sustained our national conversation on race and will continue to guide us in future years.

University Physics is designed for the two- or three-semester calculus-based physics course.

The text has been developed to meet the scope and sequence of most university physics courses and provides a foundation for a career in mathematics, science, or engineering. The book provides an important opportunity for students to learn the core concepts of physics and understand how those concepts apply to their lives and to the world around them. Due to the comprehensive nature of the material, we are offering the book in three volumes for flexibility and efficiency. Coverage and Scope Our University Physics textbook adheres to the scope and sequence of most two- and three-semester physics courses nationwide. We have worked to make physics interesting and accessible to students while maintaining the mathematical rigor inherent in the subject. With this objective in mind, the content of this textbook has been developed and arranged to provide a logical progression from fundamental to more advanced concepts, building upon what students have already learned and emphasizing connections between topics and between theory and applications. The goal of each section is to enable students not just to recognize concepts, but to work with them in ways that will be useful in later courses and future careers. The organization and pedagogical features were developed and vetted with feedback from science educators dedicated to the project. VOLUME III Unit 1: Optics Chapter 1: The Nature of Light Chapter 2: Geometric Optics and Image Formation Chapter 3: Interference Chapter 4: Diffraction Unit 2: Modern Physics Chapter 5: Relativity Chapter 6: Photons and Matter Waves Chapter 7: Quantum Mechanics Chapter 8: Atomic Structure Chapter 9: Condensed Matter Physics Chapter 10: Nuclear Physics Chapter 11: Particle Physics and Cosmology
