The booming computer games and animated movie industries continue to drive the graphics community's seemingly insatiable search for increased realism, believability, and speed. To achieve the quality expected by audiences of today's games and movies, programmers need to understand and implement physics-based animation. To provide this understanding, this book is written to teach students and practitioners and theory behind the mathematical models and techniques required for physics-based animation. It does not teach the basic principles of animation, but rather how to transform theoretical techniques into practical skills. It details how the mathematical models are derived from physical and mathematical principles, and explains how these mathematical models are solved in an efficient, robust, and stable manner with a computer. This impressive and comprehensive volume covers all the issues involved in physics-based animation, including collision detection, geometry, mechanics, differential equations, matrices, quaternions, and more. There is excellent coverage of collision detection algorithms and a detailed overview of a physics system. In addition, numerous examples are provided along with detailed pseudo code for most of the algorithms. This book is ideal for students of animation, researchers in the field, and professionals working in the games and movie industries. Topics Covered: * The Kinematics: Articulated Figures, Forward and Inverse Kinematics, Motion Interpolation * Multibody Animation: Particle Systems, Continuum Models with Finite Differences, the Finite Element Method, Computational Fluid Dynamics * Collision Detection: Broad and Narrow Phase Collision Detection, Contact Determination, Bounding Volume Hierarchies, Feature-and Volume-Based Algorithms

#1 New York Times bestselling author Christine Feehan tells the story of Abigail Drake, one of seven elementally gifted sisters who are fated to find great love. As the third daughter in a magical bloodline, Abigail Drake was born with a mystical affinity for water, and possessed a particularly strong bond with dolphins. She spent her entire life studying them, learning from them, and swimming among them in the waters off her hometown of Sea Haven... Until the day Abby witnessed a cold-blooded murder on shore, and found herself fleeing for her life—right into the arms of Aleksandr Volstov. He ' s an Interpol agent on the trail of stolen Russian antiquities, a relentless man who gets what he goes after—and the man who broke Abby ' s heart. But he isn ' t going to let the only woman he ever loved be placed in harm ' s way—or slip away from his embrace.
