optimal design, management and operation of these two systems. Focusing on the synthesis of the entire design process, the authors present the chapters in the sequence used to design systems with the analytical material presented and demonstrated in a

IRRIGATION FUNDAMENTALS is a comprehensive text on the basic principles and practices of applied agricultural irrigation. Written

Online Library Sprinkle And Trickle Irrigation By Jack Keller

over a period of more than 10 years, it is based on the authors' extensive experience in farming, consulting, research, teaching, and other related agricultural activities. The book is for use by teachers of introductory courses in irrigation, farmers who have

Online Library Sprinkle And Trickle Irrigation By Jack Keller

some basic technical knowledge, and for administrators who need a general understanding of irrigation as an aid for policy decisions in water resource development and planning. Various factors that influence crop yield and production

Online Library Sprinkle And Trickle Irrigation By Jack Keller

including climate, fertility, water, drainage, and agronomic practices are addressed. The various irrigation methods such as border, basin, contour, furrow, sub, sprinkle, and drip or trickle are described; and conditions are given for selection of the

Online Library Sprinkle And Trickle Irrigation By Jack

Keller appropriate method to use.

Recent developments and new technology are included herein when they have obvious practical applications, but for the most part the material presented in this book is based on well established principles and practices. Much of

Online Library Sprinkle And Trickle Irrigation By Jack

Keller
the content is very practical and much is essentially nontechnical. Nevertheless, some of the material covered in this book goes beyond the basic concepts in an attempt to better describe the relationships and techniques employed by irrigation scientists

Online Library Sprinkle And Trickle Irrigation By Jack Keller

and irrigation engineers. From the Preface: The future of the world depends very much on how we manage natural resources. Since the year 1900 there has been a ninefold increase in global carbon emissions from burning fossil fuels, and the world population

Online Library Sprinkle And Trickle Irrigation By Jack

Keller has increased about 3.7 times in this century. Vast areas of forests have been destroyed, and irrigated lands now produce 40% of the food supply. Due to depletion of groundwater reserves and an increase in population, irrigated area per

Online Library Sprinkle And Trickle Irrigation By Jack Keller

capita is declining. Consequently, the irrigation of additional alluvial lands is a strategic necessity for all of humankind. Much of the alluvial lands cannot be made productive without prior development of water resources through flood control, drainage,

Online Library Sprinkle And Trickle Irrigation By Jack Keller

and irrigation. The production of electricity through hydropower and the production of alcohol fuel from irrigated crops, as has been practiced for many years in Brazil, can slow the increase in carbon emissions. Such diverse developments are typically not

Online Library Sprinkle And Trickle Irrigation By Jack Keller

separable; rather, they must be considered as integral parts of a comprehensive development plan. The conservation of natural resources and increasing productivity of irrigated lands are also strategic necessities. Much of the current technology is highly

Online Library Sprinkle And Trickle Irrigation By Jack

Keller transferable and crop yields can be significantly increased on lands already under irrigation. The authors have worked in many countries in connection with resource inventories, teaching, and the planning, development and use of irrigation as a tool for

Online Library Sprinkle And Trickle Irrigation By Jack

increasing production and
providing employment. They have
written extensively and have
been honored for their
achievements. They have
considerable experience with
everything from primitive low-
technology irrigation

developments to highly developed irrigation in the USA and in dozens of countries around the world. Both of the authors have dedicated their careers to teaching, research, and consulting in agricultural irrigation and water resources development
