Documents 218 arts and humanities programs for children and youth in communities across America. Describes the context in which these programs operate, provides an overview of the highly varied cultural programs surveyed, and summarizes the principles, policies and practices found in promising programs. The value of these programs as components of any community strategy seeking to improve the lives of children and youth is reviewed, and recommendations are made for their continued examination. Discusses the need for increased technical and financial support. Photos, tables and index.

This Handbook of Research in Food Science and Technology consists of three volumes focusing on food technology and chemistry, food biotechnology and microbiology, and functional foods and nutraceuticals. The volumes highlight new research and current trends in food science and technology, looking at the most recent innovations, emerging technologies, and strategies focusing on taking food design to sustainable levels. In particular, the handbooks includes relevant information on the modernization in

the food industry, sustainable packaging, food bioprocesses, food fermentation, food microbiology, functional foods and nutraceuticals, natural products, nano- and microtechnology, healthy product composition, innovative processes/bioprocesses for utilization of by-products, development of novel preservation alternatives, extending the shelf life of fresh products, alternative processes requiring less energy or water, among other topics.

In the preface to Part I of this volume, which appeared in 1966, we stated: "... we had to leave the Antihistaminics for another volume of unpredictable dimensions. In 1924, eight pages inserted in a Chapter on Mutterkorn by Arthur R. Cushing were considered enough, in Vol. II, Part II, pp. 1319-1326 of the Hand buch. Now 922 pages did not suffice to cover all aspects of the subject ... the subject has been expanded in so many directions, that the anti histaminic part had to be excluded from the present volume. Possibly, another thousand pages will be necessary to cover what remains of the subject."* This prediction was fulfilled, and the subject of histamine has grown to such an extent that dealing with the antihistaminics only in Part II would be quite inadequate. It is imperative to include the large number of recent findings on the subject of histamine, namely the splitting of its pharmacologic receptors, and the great variety of new

This volume of the Handbook of Experimental Pharmacology (Concepts in Biochemical Pharmacology) will show that pharmacology has finally arrived as a true discipline in its own right, and is no longer the handmaiden of organic chemistry and physiology. Instead it is an amalgam of all the biological sciences including biochemistry, biophysical chemistry, physiology, pathology and clinical medicine. In the volumes that make up Concepts in Biochemical Pharmacology we hope to convince Medical Schools what should now be obvious, that pharmacology is no longer that dull topic bridging the basic sciences with medicine, but is probably the most important subject in the medical curriculum. We are grateful for the advice of Dr. BYRON CLARKE, Director of the Pharmacology-Toxicology Program at the National Institutes of Health, whose support made possible much of the work described in this volume.
