This is why many believe that global warming might help the survival of these species drastically. It will especially work well on the species living in colder areas, referred to as the temperate species.

In recent years the term 'climate change' is very rarely out of the news. Some people get very emotional about it, many look for someone to blame, some dismiss it, some protest about it, and some say and do nothing. But what is climate change and what if anything can we do about it. This book

looks at a simplistic approach to tackling climate change by looking at Carbon Neutrality which makes up the largest part of climate change, and if followed will actually achieve more than just words and protests. Carbon Neutrality is one of the most talked about topics on the planet, and let face it despite some peoples opinion it is here to stay and the population of the world have to discuss it and change their lifestyles to become carbon neutral. Through this book we look at what Carbon Neutrality is and how we can live with it by making changes to the way we live, some might say making sacrifices, I believe it is about simple survival. But creating carbon neutrality can only be effective if it is done by everyone. And not just a few 'do gooders'.

We clearly need to plan for the worst. But good advice is hard to come by - until now. The Global Warming Survival Kit includes: - Where to live to minimize the impact of climate change. - How to get drinkable water when the taps run dry. - What to eat to stay alive in town and country. - Essential survival equipment to keep ready. We can all hope that the worst scenario won't happen - but it's easier to be secure in that hope if you are well prepared.
