The Science of The X-Files - The Truth by Michael White

X-ray astronomy is a relatively new science. It was pioneered in the 1960s and 70s by American astronomers with a series of rocket flights and orbiting X-ray satellites. The astounding discoveries made by X-ray astronomers — such as neutron stars and black holes in binary systems, and hot gas filling the space within clusters of galaxies — have revolutionized our view of the Universe.

The COVID-19 syndemic is entering its most dangerous phase. There is a mounting breakdown of trust. Not only between politicians and the public. But also among politicians and publics with science and scientists. This breach of faith with science is far more threatening. For the public is slowly turning against those who have sought to guide the political response to COVID-19.

My bias towards the 10 x 3 method is based on science. The motor unit graph above shows that the greatest force producing effects of the FFR and FF motor units occur within a timeframe of less than ten seconds. The shorter the set duration, the greater the potential for force production, if the concentric muscle action and load are high enough. ...

Introduces ghosts, describing what people believe about them and examples of sightings of different ghosts.

Featuring leading scientists acting as consultants on the stories, and writing scientific afterwords, bringing the theory featured in the stories to life, including Prof. Sarah Bridle (Jodrell Bank), Prof. Jonathan Wolff and Prof. Frank Jackson (the inventor of the 'Mary's Room' thought experiment). Science is always telling stories. Whether in the creation myths of evolution or the Big Bang, or in the eureka moments of science history, narrative – just as much as metaphor – is a key tool in the scientist's surprisingly literary toolkit. Perhaps the most interesting use of story is the thought experiment, the intuition pump, that draws on the most instinctive parts of the imagination to crack otherwise perplexing problems. From Newton's Bucket, to Maxwell's Demon, from Einstein's Lift to Schrödinger's Cat – all are examples of 'fiction' being used at the highest level, not just to explain, but to deduce, to prove. In this unique anthology, authors have collaborated with leading scientists, to bounce literary, human narratives against purely theoretical ones, alloying together real stories with abstract ones, to produce truly extraordinary results. Full list of thought experiments: The Twin Paradox, The Grandfather Paradox, Maxwell's Demon, Laplace's Demon, Mary's Room, The Chinese Room, Schrödinger's Cat, Galileo's Boat, The Infinite Monkey Typing Pool, Einstein in a Lift, Einstein Chasing a Beam of Light, Newton's Bucket, Olber's Paradox.
