Lying at the crucible of Central Europe, the Silesian village of Kupferberg suffered the violence of the Thirty Years War, the Napoleonic Wars, and World War I. After Stalin's post-World War II redrawing of Poland's borders, Kupferberg became Miedzianka, a town settled by displaced persons from all over Poland and a new center of the Eastern Bloc's uranium-mining industry. Decades of neglect and environmental degradation led to the town being declared uninhabitable, and the population was evacuated. Today, it exists only in ruins, with barely a hundred people living on the unstable ground above its collapsing mines. In this collection of unsparing and insightful reportage, the renowned journalist, photographer, and architecture critic Filip Springer rediscovers this tiny town's history. Digging beyond the village's mythic foundations and the great wars and world leaders that shaped it, Springer catalogs the lost human elements: the long-departed tailor and deceased shopkeeper; the parties, now silenced, that used to fill the streets with shouts and laughter; and the once-beautiful cemetery, with gravestones upended by tractors and human bones scattered by dogs. In Miedzianka, Springer sees a microcosm of European history, and a powerful narrative of how the ghosts of the past continue to haunt us in the present day.

From the Big Bang to the future of our planet, The Little Book of Big History divides history into manageable but comprehensive time frames, encompassing the cosmos, the stars, life and everything in between. Big History is the attempt to understand and condense the entire story of the cosmos, from the Big Bang to the current day. Combining methods from history, astronomy, physics and biology to draw together the big story arcs of how the universe was created, why planets formed and how life developed, this creates a unique perspective from which to understand the place of mankind in the universe. Excited by the alternative 'framework for all knowledge' that is offered by this approach, Bill Gates is funding the Big History Project, which aims to bring the subject to a wider audience around the world. The Little Book of Big History breaks down the main themes of Big History into highly informative and accessible parts for all readers to enjoy. By giving a truly complete timeline of world events, this book shines a whole different light on history as we learned it and makes us think of our history - and our future - in a very different way.

This New York Times bestseller "elegantly weaves evidence and insights . . . into a single, accessible historical narrative" (Bill Gates) and presents a captivating history of the universe -- from the Big Bang to dinosaurs to mass globalization and beyond. Most historians study the smallest slivers of time, emphasizing specific dates, individuals, and documents. But what would it look like to study the whole of history, from the big bang through the present day -- and even into the remote future? How would looking at the full span of time change the way we perceive the universe, the earth, and our very existence? These were the questions David Christian set out to answer when he created the field of "Big History," the most exciting new approach to understanding where we have been, where we are, and where we are going. In Origin Story, Christian takes readers on a wild ride through the entire 13.8 billion years we've come to know as "history." By focusing on defining events (thresholds), major trends, and profound questions about our origins, Christian exposes the hidden threads that tie everything together -- from the creation of the planet to the advent of agriculture, nuclear war, and beyond. With stunning insights into the origin of the universe, the beginning of life, the emergence of humans, and what the future might bring, Origin Story boldly reframes our place in the cosmos.
