A millennium into the future, two advancements have altered the course of human history: the colonization of the Galaxy and the creation of the positronic brain. On the beautiful Outer World planet of Solaria, a handful of human colonists lead a hermit-like existence, their every need attended to by their faithful robot servants. To this strange and provocative planet comes Detective Elijah Baley, sent from the streets of New York with his positronic partner, the robot R. Daneel Olivaw, to solve an incredible murder that has rocked Solaria to its foundations. The victim had been so reclusive that he appeared to his associates only through holographic projection. Yet someone had gotten close enough to bludgeon him to death while robots looked on. Now Baley and Olivaw are faced with two clear impossibilities: Either the Solarian was killed by one of his robots--unthinkable under the laws of Robotics--or he was killed by the woman who loved him so much that she never came into his presence!

Called to the Spacer world to solve a case of roboticide, New York City detective Elijah Baley teams up with humanoid robot R. Daneel Olivaw to prove that the prime suspect, a renowned roboticist, is innocent of the crime. Reprint.

?NAL launches its new SF imprint, ROC, with a collection of 18 of Asimov's (Foundation) robot stories. The earliest tales here, written from 1940 to 1960, remain among the most-loved in the field, the best being “Little Lost Robot,” about a robot who obeys an order to “get lost.” “The Bicentennial Man” (1976) about one robot's desires and efforts to be first free, then equal, is the quintessential robot-as-man's-mirror story. The book concludes with brief essays offering companionable commentary on the history of robots in fiction, the Frankenstein complex, the origin of Asimov's famous Three Laws and the author's own surprise at the emergence of robots during his lifetime. Review “This collection offers 18 stories about robots as well as brief essays in which Asimov comments on robots in fiction, the Frankenstein complex, his famous Three Laws and the development of actual robots. “The earliest tales here, written from 1940 to 1960, remain among the most-loved in the field.” —Publishers Weekly “Classic stories with new material, both fiction and fact, that puts the whole theme together in a larger context.” —Poul Andersen About the Author Isaac Asimov authored over 400 books in a career that lasted nearly 50 years. As a leading scientific writer, historian, and futurist, he covered a variety of subjects ranging from mathematics to humor, and won numerous awards for his work.

Lije Baley and R. Daneel Olivaw, a robot, investigate the murders of a famous robotocist, an isolated inhabitant of Solaria, and Jander Panell, an advanced robot

The development of robot technology to a state of perfection by future civilizations is explored in nine science fiction stories.

Science fiction-roman.

From her place in the store, Klara, an Artificial Friend with outstanding observational qualities, watches carefully the behaviour of those who come in to browse, and of those who pass in the street outside. She remains hopeful a customer will soon choose her, but when the possibility emerges that her circumstances may change for ever, Klara is warned not to invest too much in the promises of humans. In 'Klara and the Sun', Kazuo Ishiguro looks at our rapidly-changing modern world through the eyes of an unforgettable narrator to explore a fundamental question: what does it mean to love?

A description of the sun, the star of our solar system, which includes information on its origin, physical composition, and characteristics, as well as on studies made of the sun by instruments and satellites.
