The web of inclusion : a new architecture for building ...

Architecture. Helgesen (1995) describes the web of inclusion as a new source of order described by Wheatley in her much quoted book, Leadership and the New Science (1994). In other words, the web provides a way of relating individual parts to a greater whole. Because a web is built from the center out, the development is a never-ending process.

The American Institute of Architects, as part of the global community, champions a culture of equity, diversity, and inclusion within the profession of architecture to create a better environment for all. Achieving this vision has a direct impact on the relevance of our profession and the world's prosperity, health, and future. Learn more >

### Equity, diversity, and inclusion - AIA

The frequent complaint that the architecture field lacks gender and racial diversity is backed up by statistics. As of 2011, just 15 percent of licensed architects were women, and just one percent were black, according to statistics assembled by the AIA. While a number of women architects have recently ascended to more-prominent positions and ...

"Web of inclusion" is used to describe integrated and organic organizations that become effective because management puts itself at the center rather than at the top.

Helgesen lays out the theory behind her provocative vision of a new style of management, then profiles five organizations that have achieved extraordinary success by adopting webs of inclusion: the hi-tech Intel in Silicon Valley; the Miami Herald, a traditional media company; Beth Israel Hospital in Boston; Nickelodeon in New York; and Anixter Inc., a cable and wire vendor based in Chicago. Each profile vividly demonstrates a different advantage of the web of inclusion.

Authors Lee Bolman and Terrence Deal explain how to use the powerful tool of reframing, deliberately looking at situations from more than one vantage point, to bring order out of confusion and to build high-performing, responsive organizations.

Now in Currency paperback -- Sally Helgesen's classic study of female leaders and how their strategies represent a highly successful revision of male leadership styles. Sixty thousand copies in print! In her bestselling 1990 book, Sally Helgesen discovered that men and women approach work in fundamentally different ways. Many of these differences hold distinct advantages for women, who excel at running organizations that foster creativity, cooperation, and intuitive decision-making power, necessities for companies of the twenty-first century. Helgesen's findings reveal that organizations run by women do not take the form of the traditional hierarchical pyramid, but more closely resemble a web, where leaders reach out, not down, to form an interrelating matrix built around a central purpose. The strategy of the web concentrates power at the center by drawing others closer and by creating communities where information sharing is essential. She presents her findings through unique, closely detailed accounts of four

successful women business leaders -- Frances Hesselbein of Girl Scouts USA, Barbara Grogan of Western Industrial Contractors, Nancy Badore of Ford Motor Company's Executive Development Center, and Dorothy Brunson of Brunson Communications. Helgesen observes their meetings, listens to their phone calls and conferences, and reads their correspondence. Her "diary studies" document how women leaders make decisions, schedule their days, gather and disperse information, motivate others, delegate tasks, structure their companies, hire, and fire. She chronicles how their experiences as women -- wives, mothers, friends, sisters, daughters -- contribute to their leadership style.

Discusses Web site hierarchy, usability, navigation systems, content labeling, configuring search systems, and managing the information architecture development process.

Women who fight in wars also have to fight for their right to do so. But what are the obstacles impeding their progress in achieving equal status as both active service members and as veterans? This book, written by a team of female veterans and military scholars, demonstrates the ways in which women service members and veterans experience a unique set of challenges when attempting to both honorably serve their country and reintegrate into civilian society following military service. These challenges include -- but are not limited to -- discrimination, staggering rates of suicide, and barriers to obtaining treatment for military sexual trauma and other critical benefits through the U.S. Department of Veterans Affairs. *Women Veterans: Lifting the Veil of Invisibility* examines current service-related policies and gender in the military's hierarchical power structure. Here, a confluence of white male privilege and entitlement, the culture of domination, and the effeminization of the enemy manifest themselves as a backlash against women, calling into question a woman's agency and her very status as a citizen. Special attention in the book is paid to the civil-military divide, representative bureaucracy, and the function of the military and civilian justice systems. Moreover, the need for appropriate healthcare policies and structures is examined within a "wicked problems" framework. The authors conclude that the responsibility for women veterans, and all veterans for that matter, must become a matter of compelling government interest. This ground-breaking book is required reading for practitioners of public policy and administration with an interest in military and veterans affairs, public health, NGOs and activist groups, as well as scholars of gender and public service, public personnel management, and nonprofit management.

Web engineering is a new discipline that addresses the pressing need for systematic and tool-supported approaches for the development, maintenance and testing of Web applications. Web engineering builds upon well-known and successful software engineering principles and practices, adapting them to the special characteristics of Web applications. Even more relevant is the enrichment with methods and techniques stemming from related areas like hypertext authoring, human-computer interaction, content management, and usability engineering. The goal of the 4th International Conference on Web Engineering (ICWE 2004), in line with the previous ICWE conferences, was to work towards a better understanding of the issues related to Web application development. Special attention was paid to emerging trends, technologies and future visions, to help the academic and industrial communities identify the most challenging tasks for their research and projects. Following a number of successful workshops on Web engineering since 1997 at well-known conferences, such as ICSE and WWW, the first conference on Web engineering was held in Cadiz, Spain in 2001. It was followed by ICWE 2002 in Santa Fe, Argentina and ICWE 2003 in Oviedo, Spain. In 2004 ICWE moved to the center of Europe and was held in Munich, Germany from July 26 to 30. ICWE 2004 was organized by the Institute for Informatics of the Ludwig-Maximilians-Universität at (LMU) Munich. The ICWE 2004 edition received a total of 204 submissions, out of which 25 papers were selected by the Program Committee as full papers (12% acceptance).

In achieving civic engagement and social justice in smart cities, literacy programs are offered in the society by three essential information service providers: libraries, archives, and museums. Although the library and museum services are documented in literature, there is little evidence of community-led library or museum services that make a full circle in understanding community-library, community-archive, and community-museum relationships. *The Handbook of Research on the Role of Libraries, Archives, and Museums in Achieving Civic Engagement and Social Justice in Smart Cities* examines the application of tools and techniques in library and museum literacy in achieving civic engagement and social justice. It also introduces a new outlook in the services of libraries and museums. Covering topics such as countering fake news, human rights literacies, and outreach activities, this book is essential for community-based organizations, librarians, museum administrations, education leaders, information professionals, smart city design planners, digital tool developers, policymakers engaged in diversity, researchers, and academicians.

This book constitutes the refereed post-proceedings of the Third European Workshop on Software Architecture, EWSA 2006, held in France in September 2006. The 13 revised full research papers and five revised position papers presented together with one invited talk were carefully reviewed and selected. All current aspects of software architectures are addressed ranging from foundational and methodological issues to application issues of practical relevance.

A much-needed reference to the latest thinking in universal design *Universal Design: Creating Inclusive Environments* offers a comprehensive survey of best practices and innovative solutions in universal design. Written by top thinkers at the Center for Inclusive Design and Environmental Access (IDeA), it demonstrates the difference between universal design and accessibility and identifies its relationship to sustainable design and active living. Hundreds of examples from all areas of design illustrate the practical application of this growing field. Complete, in-depth coverage includes: -- The evolution of universal design, from its roots in the disability rights movement to present-day trends -- How universal design can address the needs of an aging population without specialization or adaptation to reduce the need for expensive and hard-to-find specialized products and services -- Design practices for human performance, health and wellness, and social participation -- Strategies for urban and landscape design, housing, interior design, product design, and transportation Destined to become the standard professional reference on the subject, *Universal Design: Creating Inclusive Environments* is an invaluable resource for architects, interior designers, urban planners, landscape architects, product designers, and anyone with an interest in how we access, use, and enjoy the environment.
