A comprehensive introduction to designing services according to the needs of the customer or participants, this book addresses a new and emerging field of design and the disciplines that feed and result from it. Despite its intrinsic multidisciplinaryity, service design is a new specialization of design in its own right. Responding to the challenges of and providing holistic, creative and innovative solutions to increasingly complex contemporary societies, service design now represents an integrative and advanced culture of design. All over the world new design studios are defining their practice as service design while long established design and innovation consultancies are increasingly embracing service design as a key capacity within their offering. Divided into two parts to allow for specific reader requirements, Service Design starts by focusing on main service design concepts and critical aspects. Part II offers a methodological overview and practical tools for the service design learner, and highlights fundamental capacities the service design student must master. Combined with a number of interviews and case studies from leading service designers, this is a comprehensive, informative exploration of this exciting new area of design.

This book adopts a multidisciplinary approach to innovation, and argues that because innovation is always risky business, trust is an essential premise and outcome of successfully designing, developing and finally launching innovations. Each part of the book encompasses a different aspect of innovating for trust. It begins with the notion of trust, before covering the importance of trust in future thinking, business model innovation, service design, co-creation, the innovative organization and self-service technologies. It concludes with the importance of trust in commercializing innovations.

Service design is a rapidly growing area of interest in design and business management. There are a lot of books on how to get started, but this is the first book that describes what a 'good' service is, what makes a good service and why. This book lays out the essential principles for building services that work well for users. Demystifying what we mean by a 'good' and 'bad' service and describing the common elements within all services that mean that it either works for users or doesn't. This book is for anyone who is involved in designing or delivering services and aims to give the reader an understanding of what the common characteristics of a "good service" are to users. For readers who are not professional service designers, this book gives an indication of what they or their teams should be aiming for, without presuming they will invest a significant amount of time designing a service themselves.

This book examines the nature of service design and service thinking in healthcare and hospital management. By adopting both a service-based provider perspective and a consumer-oriented perspective, the book highlights various healthcare services, methods and tools that are desirable for customers and effective for healthcare providers. In addition, readers will learn about new research directions, as well as strategies and innovations to develop service solutions that are affordable, sustainable, and consumer-oriented. Lastly, the book discusses policy options to improve the service delivery process and customer satisfaction in the healthcare and hospital sector. The contributors cover various aspects and fields of application of service design and service thinking, including service design processes, tools and methods; service blueprints and service delivery; creation and implementation of services; interaction design and user experience; design of service touchpoints and service interfaces; service excellence and service innovation. The book will appeal to all scholars and practitioners in the hospital and healthcare sector who are interested in organizational development, service business model innovation, customer involvement and perceptions, and service experience.

A practical guide to integrate Design Thinking and Lean Startup in the service era. "Pinheiro will inspire you to think differently about business, design, education, and - perhaps most importantly - the way you work every day." - Kerry Bodine, co-author of Outside In: The Power of Putting Customers at the Center of Your Business "In this book, Tenny offers some extremely valid and hard-hitting criticism regarding the ideals surrounding the dictate of building a Minimum Viable Product. Agreed on many fronts but I found his reinvention of these principles when applied to the service industry to be extremely insightful. The concept of a Minimum Valuable Service is unique, new and sets goals intended to deliver maximum value with measurable results. This is a must read for anyone in the global innovation economy." - Rick Rasmussen, NextGSV. International Business development. This book is a practical guide that explores how startup entrepreneurs and business leaders, who hold no Design degrees, can integrate Service Design into their development cycles in order to create sustainable, desirable and profitable new services. In the first part, Tenny explores the reasons why startups need to move away from the "make and sell" industrial logic we've been exploiting over the last century. To take its place he proposes a new service oriented mindset that carries the idea of "learn, use and remember" users' journeys. He also discusses the challenges our industrial society is facing and how the combination of design with a service oriented mentality can be key to help new and existent businesses make this shift. In the second part, he will take you on a journey through the MVS - Minimum Valuable Service - model. This model can seamlessly integrate Service Design into the Lean Startup or any Agile development cycle. It adds the human values needed to foster service innovations within the Lean's scientific approach. In this part of the book you will learn tools, methods and practices that will help you get your hands dirty with design. At some point every adventure requires a great guide, and this journey into the heart of the new is led impeccably by Tenny Pinheiro. Slyly sidestepping the pitfalls of the Lean Startup approach, he skillfully navigates us through to a deeper understanding of the forces shaping the evolving service economy. By trusting the wisdom of the many to help design the next phase of business, his approach taps into an inexhaustible source of creativity and innovation. The Service Startup is a trusty roadmap that you will long keep by your side. As Tenny might suggest: learn it, use it, and remember it. - Jamer Hunt, Parsons The New School for Design. Director for the graduate Program in Transdisciplinary Design. "I'll admit it: I enjoy seeing someone who knows their stuff re-assemble and improve on the work of an adjacent profession. Tenny calls out what's lacking in the Lean Startup approach, in the most thorough and insightful ways. In the spirit of iteration, he's taken an existing approach and improved on it. If only all criticism were this good. I enjoyed his delightfully nuanced views on the world of services - how they're perceived, experienced, and remembered - as well as his historical perspectives on the worlds of design, business and marketing. Opinionated but also well-informed, this is a pragmatic, human-centric take on designing and delivering services that I'd recommend to anyone whose work affects other people. - Chad Thornton, Experience Designer, Airbnb"

In Design for Services, Anna Meroni and Daniela Sangiorgi articulate what Design is doing and can do for services, and how this connects to existing fields of knowledge and practice. Designers previously saw their task as the conceptualisation, development and production of tangible objects. In the twenty-first century, a designer rarely 'designs something' but rather 'designs for something'; in the case of this publication, for change, better experiences and better services. The authors reflect on this recent transformation in the practice, role and skills of designers, by organising their book into three main sections. The first section links Design for Services to existing models and studies on services and service innovation. Section two presents multiple service design projects to illustrate and clarify the issues, practices and theories that characterise the discipline today; using these case studies the authors propose a conceptual framework that maps and describes the role of designers in the service economy. The final section projects the discipline into the emerging paradigms of a new economy to initiate a reflection on its future development.
