Why are there morning people and night people? How come time flies when you're having fun and three minutes can sometimes seem an eternity? Would time exist if we didn't measure it – and why is there never enough of it? Our modern lives are ruled by minutes and hours. We race from one thing to the next, all of us believing on some level that a mysterious cosmic force called 'time' is ticking on. And it's always in short supply. But is the time we live really like that? Could there in fact be another, alternative version, entwined with the official one? Here Stefan Klein explores the hidden dimensions of time, looking at everything from when the present becomes the past to the tribe that see the future backwards, from when sex is best to why the years seem to speed by as we age. And he reveals how we can learn to live in harmony with the secret clock within us, altering our perceptions to transform our lives. To be enjoyed in the morning or the evening (depending on your body clock), this book will make you think the next time you check your watch – and maybe even slow down a little.

Americans have debated the Constitution since the day it was signed, but rarely in its 223-year history have so many disagreed so fiercely about so much. Everywhere there seems to be a debate about the Constitution's meaning and message. The Tea Party, with its almost fanatical focus on the founding documents, contends that its primary purpose is to restrain the federal government—but does it really say that? Among scholars, some believe the Constitution should be interpreted exactly as the framers wrote it, while others analyze the text just as closely to find the elasticity they believe the framers had in mind. But how could the founding fathers know about the world today, with DNA, sexting, airplanes, TV, Medicare, computers and Lady Gaga? In this probing and accessible book, TIME's editors bring the founding document to life, showing how it was written in a spirit of change and revolution and turbulence. With an introduction by one of America's top jurists, an essay by TIME managing editor Richard Stengel (former president of the National Constitution Center), and the full text of the 8,000-word Constitution annotated to show its most controversial passages and little-known quirks, TIME's compact volume will be an indispensable guide for the well-informed citizen.

Answers to science's most enduring questions from "Can I break the light-speed barrier like on Star Trek?" and "Is there life on other planets?" to "What is empty space made of?" This is an indispensable guide to physics that offers readers an overview of the most popular physics topics written in an accessible, irreverent, and engaging manner while still maintaining a tone of wry skepticism. Even the novice will be able to follow along, as the topics are addressed using plain English and (almost) no equations. Veterans of popular physics will also find their nagging questions addressed, like whether the universe can expand faster than light, and for that matter, what the universe is expanding into anyway. Gives a one-stop tour of all the big questions that capture the public imagination including string theory, quantum mechanics, parallel universes, and the beginning of time Explains serious science in an entertaining, conversational, and easy-to-understand way Includes dozens of delightfully groan-worthy cartoons that explain everything from special relativity to Dark Matter Filled with fascinating information and insights, this book will both deepen and transform your understanding of the universe.
