Exams)For Academic Year 2020-2021

Knowledge updating is a never-ending process and so should be the revision of an effective textbook. The book originally written fifty years ago has, during the intervening period, been revised and reprinted several times. The authors have, however, been thinking, for the last few years that the book needed

not only a thorough revision but rather a substantial rewriting. They now take great pleasure in presenting to the readers the twelfth, thoroughly revised and enlarged, Golden Jubilee edition of the book. The subject-matter in the entire book has been re-written in the light of numerous criticisms and suggestions received from the users of the earlier editions in India and abroad. The basis of this revision has been the emergence of new literature on the subject, the constructive feedback from students and teaching fraternity, as well as those changes that have been made in the syllabi and/or the pattern of examination papers of numerous universities. Knowledge updating is a never-ending process and so should be the

revision of an effective textbook. The book originally written fifty years ago has, during the intervening period, been revised and reprinted several times. book has been re-written in the light of numerous criticisms and suggestions received from the users of the earlier editions in India and abroad. The basis of this revision has been the emergence of new literature on the subject, the constructive feedback from students and teaching fraternity, as well as those changes that have been made in the syllabi and/or the pattern of examination papers of numerous universities. Some prominent additions are given below: 1. Variance of Degenerate Random Variable 2. Approximate Expression for Expectation and Variance 3. Lyapounov's Inequality 4. Holder's Inequality 5. Minkowski's Inequality 6. Double Expectation Rule or Double-E Rule and many others

Heterocyclic chemistry is of prime importance as a sub-discipline of Organic Chemistry, as millions of heterocyclic compounds are known with more being synthesized regularly Introduces students to heterocyclic chemistry and synthesis with practical examples of applied methodology Emphasizes natural product and pharmaceutical applications Provides graduate students and researchers in the pharmaceutical and related sciences with a background in the field Includes problem sets with several chapters

Designed for undergraduate and postgraduate

students of mathematics the book can also be used by those preparing for various competitive examinations. The text starts with a brief introduction to results from set theory and number theory. It then goes on to cover groups, rings, vector spaces (Linear Algebra) and fields. The topics under Groups include subgroups, permutation groups, finite abelian groups, Sylow theorems, direct products, group actions, solvable and nilpotent groups. The course in Ring theory covers ideals, embedding of rings, euclidean domains, PIDs, UFDs, polynomial rings, irreducibility criteria, Noetherian rings. The section on vector spaces deals with linear transformations, inner product spaces, dual spaces, eigen spaces,

diagonalizable operators etc. Under fields, algebraic extensions, splitting fields, normal and separable extensions, algebraically closed fields, Galois extensions and construction by ruler and compass are discussed. The theory has been strongly supported by numerous examples and worked out problems. There is also plenty of scope for the readers to try and solve problems on their own. NEW IN THIS EDITION ∏ Learning Objectives and Summary with each chapter ∏ A large number of additional worked-out problems and examples ∏ Alternate proofs of some theorems and lemmas ∏ Reshuffling/Rewriting of certain portions to make them more reader friendly

Published in association with the Commonwealth of Learning Open and distance learning has expanded dramatically in recent years across the world, across the spectrum of subject areas, and across educational levels. This book takes a detailed look at the state of the art of open and distance learning in higher education, and presents a fascinating picture of a world and its educational culture in transition. This edited collection contains authoritative analyses of key issues together with current accounts of practice in each region of the world. It includes *open and distance learning in relation to internationalisation, lifelong learning and flexible learning *costs of distance education *the impact of

telecommunications *applications of open and distance learning in Africa, the Americas, Asia, Europe and Oceania. It draws together experts in the field from all over the world, and has a truly international perspective on the phenomenon of open and distance learning. Its unparalleled breadth of coverage makes it an indispensable work of reference for experts and newcomers alike.

Introduction to the mathematics of cryptology suitable for beginning undergraduates.

Superelectrophiles and Their Chemistry contains, for the first-time, a discussion of the basics of this

emerging field of organic chemistry, alongside tools to help the reader apply the chemistry. Specific tools include an evaluation of the ways to increase the strength of electrophiles, the classification of superelectrophiles, the solvation issues, a review of methods for studying superelectrophilicity, with details of the superelectrophiles that have been identified and studied. Additional information includes substituent effects in activation of superelectrophiles, and solvation in chemical reactions, as well as an insightful look into future applications.
